

Jesse Pinkman

Full-Stack Software Engineer | AI/Automation Engineer

jesse@email.com | [LinkedIn](#) | [GitHub](#) | [LeetCode](#) | [Codeforces](#) | [jessepinkman.dev](#)

SKILLS

Languages: JavaScript | TypeScript | Python | Java | SQL

Frameworks: React | Node.js | Spring Boot | FastAPI | Next.js | LangChain | LangGraph

AI & Agents: RAG Pipelines | Vector DBs (Pinecone, Weaviate) | CrewAI | Prompt Engineering

Tools & Infra: Docker | Kubernetes | AWS | PostgreSQL | Redis | Git | CI/CD | n8n

Soft Skills: System Design | Code Review | Mentorship | Cross-team Collaboration

EXPERIENCE

Acme Corp

Jan 2023 - Present

Senior Software Engineer — TypeScript, React, Node.js, LLMs

San Francisco, CA (Remote)

- Led development of a customer-facing dashboard used by 50k+ users, reducing page load time by 40% through lazy loading and server-side rendering optimizations.
- Built an internal AI assistant using LangChain and GPT-4o that automated support ticket triage and routing, cutting average resolution time by 65% and saving 120+ engineering hours per month.
- Designed an agentic AI pipeline for automated code review using LLM-based analysis and tool-calling agents, catching 30% more bugs before reaching production.
- Architected a microservices-based notification system handling 2M+ events per day using Node.js, Kafka, and Redis.
- Mentored 4 engineers through code reviews and pair programming; led team adoption of TypeScript strict mode across 3 core services.

Beta Technologies

Jun 2021 - Dec 2022

Software Engineer — Java, Spring Boot, PostgreSQL, Python

New York, NY

- Built RESTful APIs for a B2B SaaS platform serving 200+ enterprise clients, owning the full lifecycle from design to production deployment.
- Integrated an AI-powered fraud detection microservice (scikit-learn + FastAPI) into the payment flow, reducing fraudulent transactions by 42% in Q1 2022.
- Reduced database query times by 60% through query optimization, materialized views, and strategic indexing on high-traffic tables.
- Automated CI/CD deployment pipelines using GitHub Actions and Docker, cutting release cycle time from 2 weeks to 2 days.
- Built a Python automation layer for internal reporting that eliminated 15+ hours of manual weekly work.

Startup XYZ

Aug 2020 - May 2021

Junior Software Engineer — Python, FastAPI, React

Remote

- Developed core product features from scratch, including user authentication, billing integration, and an admin dashboard.
- Integrated Stripe payment processing and webhook handling for subscription management.
- Built an AI chatbot using the OpenAI API to automate new-user onboarding, improving activation rate by 28% and reducing support tickets by 40%.
- Contributed to infrastructure-as-code migration from manual deploys to Terraform + AWS ECS, cutting environment setup time from hours to minutes.

PROJECTS

TaskFlow | [GitHub](#) | [Live](#)

- Full-stack project management tool built with Next.js, PostgreSQL, and Prisma; supports real-time collaboration via WebSockets, role-based access control, and an AI assistant that suggests task priorities using GPT-4o.

AutoAgent | [GitHub](#) | [Live](#)

- Multi-agent orchestration framework built with LangGraph and Python; enables autonomous task decomposition using role-based AI agents with tool-calling, persistent memory, and human-in-the-loop approval flows.

OpenMetrics | [GitHub](#) | [Live](#)

- Lightweight self-hosted analytics dashboard with AI anomaly detection built with React and ClickHouse; automatically surfaces performance regressions and processes 500k+ events per day with sub-second query times.

EDUCATION

Bachelor of Science — Computer Science

Aug 2016 - May 2020

State University

Austin, TX

- Relevant coursework: Data Structures, Algorithms, Operating Systems, Distributed Systems, Database Systems.

ACHIEVEMENTS

Solved 700+ problems on LeetCode (Knight, top 3.5%); rated 1900+ on Codeforces (Expert)

[LeetCode](#) ↗

Won 1st place at HackState 2023, building an AI-powered transit optimizer for a city with 500k daily commuters
